

At-Home Test-to-Treat Solution

The Ohio Department of Health is partnering with eMed to offer a virtual “test-to-treat” option that can quickly connect individuals to testing and a prescription to secure COVID-19 treatment.

Since January 2021, Ohio has worked with eMed to distribute millions of Abbott BinaxNOW Home tests to Ohioans through local health departments, public libraries, schools, universities, federally qualified health centers, and other partners.

Using the eMed at-home test to access treatment is simple:

Scan the code on your test or go to ohio.emed.com from a computer or smartphone to begin the testing process.

A telehealth proctor walks you through the test “live” and verifies the results with an official lab report.

If you test positive, eMed can immediately connect you to a clinician who can provide a medical evaluation and prescribe treatment if you qualify, all without leaving your home.

Prescriptions provided through eMed can be filled at a pharmacy of your choice for pick up or delivery nationwide, depending on your location and the availability of the treatment.

There is no cost to the individual for the state-provided eMed rapid antigen test or the verified lab report, clinical evaluation, prescription, or treatment
